IN LIGHT OF HURRICANE MATTHEW, LOCAL GLENDALE BASED COMPANY HAS BUILT THE “RELIEF BOX”, A DISASTER RELIEF HOUSING UNIT FOR IMMEDIATE DISPATCH WITH PLANS TO BUILD AN ENTIRE FLEET.

Glendale, Ariz., October 5, 2016– Local business, Modern Container Concepts, LLC (MCC) has built “The Relief Box” out of a repurposed 40’ shipping container whose sole purpose is to provide relief to those displaced after a catastrophic event has occurred at their home. MCC is planning to build a fleet of disaster relief housing units to dispatch immediately following a catastrophe like Hurricane Matthew that is currently threatening the eastern United States. The Relief Box may be leased furnished and is large enough to house a family of five to six for an indefinite amount of time.

Shipping containers are steel boxes designed to ship goods throughout the world and withstand the harshest climates on earth. Due to the fact that they are readily available, cost-effective and exceedingly strong, they are an ideal structure to use when building both temporary and permanent buildings. “I have seen firsthand what fires, floods, tornadoes and hurricanes can do to a community and the instant demand that is created for safe, secure and immediate housing.” says Dan Grifford III, a native to Phoenix and Partner of MCC. “Ever since Adrian Garneata and I started this company, our goal has been to build a fleet of housing units that can be available immediately when the need arises.”

The fleet of disaster relief housing will be built, stored and dispatched from Phoenix, Arizona and the company strives to support as many local businesses as possible. The primary function of the Relief Box is to provide safe, durable housing for those who need it most. MCC has already designed and built The Relief Box right here in the valley and will duplicate the same model over and over until an adequate supply of housing is available for use. The open space floor plan (attached) allows the Relief Box to be used as a single family home, a live/work situation for volunteers or adjusters dispatched to catastrophe areas and several other uses.

According to Grifford, The Relief Box is the best on-site temporary housing solution available in the market today. Repurposing shipping containers for construction is not only affordable, it is durable and functional as the containers are designed to be water, mold, fire and air proof. Because of their construction, Garneata adds that “ISO shipping containers are meant to withstand harsh climates and are ideal in almost any environment. They have been said to be the strongest modular structure on earth. We strive to optimize the core benefits of the container structure while providing a functional, modern design.”

About Modern Container Concepts, LLC

Also known as “MCC”, the local company was founded to recycle used and/or idle shipping containers and repurpose them for temporary disaster housing and transportable “tiny houses”. Their goal is to build strong, sustainable and safe concepts in a fraction of the time and cost of wood framed buildings. The containers are made entirely of steel, which is the world’s most recycled material. Custom built residential and commercial shipping container applications are available at the client’s request.

Visit their website www.ModernContainerConcepts.com or follow on Facebook, Instagram and Twitter for more information.

RELIEF BOX

Temporary housing is most often needed after a flood, fire or for disaster relief situations. Because Modern Container Concepts is extremely familiar with the insurance claims process, they have experts on staff to expedite the relocation process into one of their temporary housing units called “The Relief Box”.

The Relief Box is a modern designed container home that is self-contained and is a temporary housing solution that can be leased with or without furniture.

- | | | |
|----------------------|-------------------------|-------------------------------|
| 1. ELECTRICAL PANEL | 5. ENTERTAINMENT | 9. QUEEN SIZE BED |
| 2. A/C COMPRESSOR | 6. WATER HEATER | 10. KITCHENETTE |
| 3. A/C UNIT ABOVE | 7. FRESHWATER STORAGE | 11. FUTON/SOFA BED – SLEEPS 2 |
| 4. UNDER-BED STORAGE | 8. BUNK BED – TWIN SIZE | 12. DINING AREA |

At one end of the container is a full bathroom with bathtub, sink, heat lamp and ample storage space. On the other end is a master suite large enough for a queen bed! In between is the kitchen, living room, dining room and a bonus room that can be used as a bunk suite for the kids or office space for an adjuster dispatched on short term or long term CAT duty.
